

# From Climate Vulnerable to Climate Smart

The basic concept of climate change lies upon the fact that Bangladesh is most vulnerable to the scientific phenomena of global warming and thus, climate change. The reasons behind such high vulnerability are its geographical location, high population density, and the alarming levels of poverty. Some extreme effects of climate change may be of great concern for a country where many livelihoods rely on climate sensitive sectors, particularly rural agriculture and fisheries.

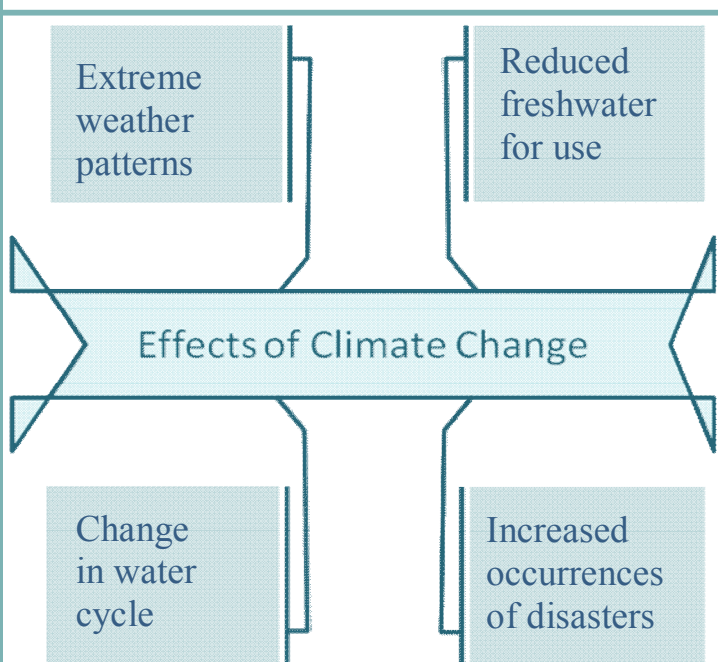

ICCCAD with its expertise in knowledge generation, management and capacity building in context of climate change, helps organizations from different tiers understand the significance and comprehend grounded knowledge on climate change that can be shared and transmitted around the world. As a part of its knowledge sharing purpose, ICCCAD is now offering its new training workshop specifically on climate change and disaster.

## Training Workshop on Climate Change and Disaster

With Who:  
BBC Media  
Action

When:  
**19-21 July, 2014**  
(Saturday to Monday)
